

ARTIFICIAL INTELLIGENCE ASSIGNMENT

Plant Info Agent

Name: Maryam Tariq

Roll No: 23122122

Program: BSCS 6th Semester (Section C)

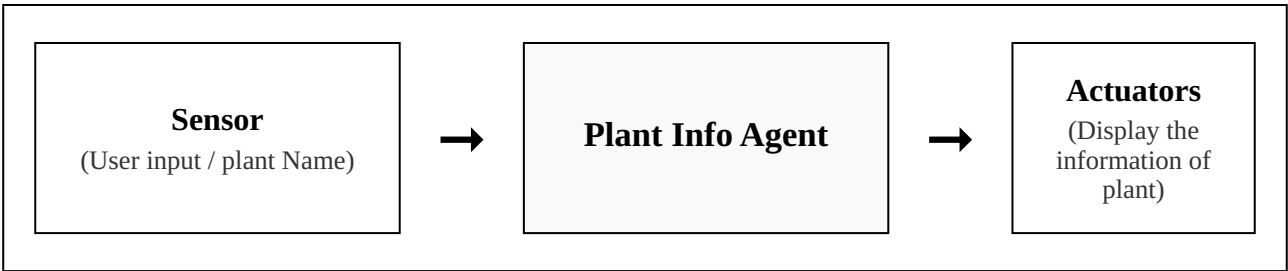

PLANT INFO AGENT

Textual Representation:

"Plant-info-agent is a rule-based agent that takes the plant name as input from the user (sensor), matches it with IF-THEN rules in its database (processing), and displays complete care information including water, sunlight, temperature, soil, and extra tips on the screen (actuator) to help the user take care of their plant in any environment (home, garden, or farm)."

Component	Description
Sensor	User types the plant name (input)
Actuator	Screen displays the plant care info (output)
Environment	The device where the agent is installed or working

GRAPHICAL REPRESENTATION

PEAS FRAMEWORK

- P** → Accurate Plant Guidance
- E** → Device (Mobile/Laptop)
- A** → Display plant care information on screen
- S** → user input plant name

ENVIRONMENT TYPES

Property	Type	Reason (One Line)
Observability	Fully Observable	because agent fully observed the plant by its name
Determinism	Deterministic	Same plant name always gives the same output.
Episodicity	Episodic	Each plant data is independent.
Change	Static	because predefined rules don't change during operation.
Values	Known	all data is prestored
